

August 2025

Upcoming Awards and Conferences

Climate Change & Business Conference

8-9 September

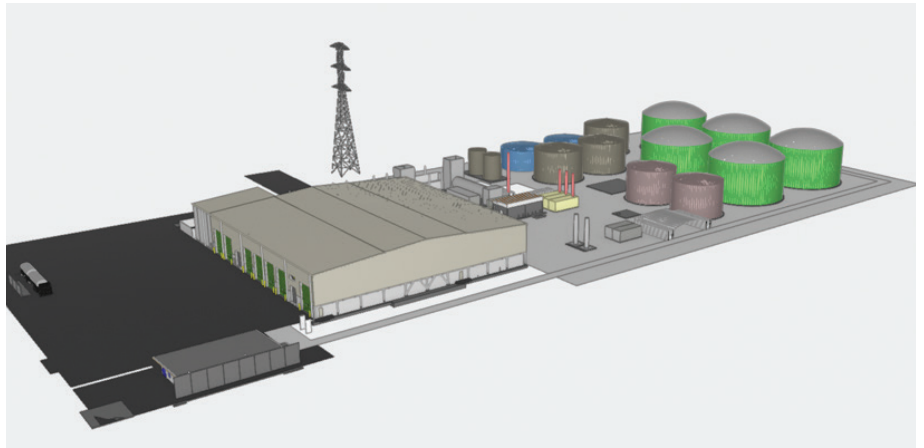

Viaduct Events Centre,
Auckland

The 2025 Climate Change and Business Conference will focus on Ambition. Accountability. Action.

Ecogas News

News and stories from our team, partners and community

Welcome to Ecogas News, our monthly newsletter sharing the latest from Ecogas Reporoa.

Christchurch Resource Consent Granted!

Ecogas has been granted resource consent by Environment Canterbury for our proposed Ōtautahi Christchurch Regional Organics Processing Facility.

The facility will use anaerobic digestion and biomass processing to transform household food and garden organics into renewable energy and biofertiliser, supporting a more sustainable future for Canterbury.

To read more see our media release on our website under news.

Great to see momentum building for biogas in Aotearoa

We were proud to join the Biogas Bridge forum in Wellington, sharing how Ecogas is transforming food waste into renewable energy and regenerative fertiliser, helping empower regions through circular solutions.

Energy Minister Hon. Simon Watts announcement to support a growing biogas market is a powerful signal of what's possible when government, industry, and innovators come together to unlock low-emissions, circular opportunities.

Partner Stories

Huge thanks to the team at Vertex Engineers Limited for helping us expand our flare capacity with speed and precision. Their flexibility and expertise helped us get the new flare system installed, commissioned, and certified in just 6 days, boosting our biogas processing capability ahead of schedule.

Great to have partners who keep things moving and share our focus on smart, scalable solutions.

If you would like to share your story please email lara.mathews@pioneerenergy.co.nz

Driving Fertility and Sustainability

Central Transport Ltd is more than just a transport company, they're an essential part of the fertify™ journey. From loading up at our Ecogas facility to spreading regenerative fertiliser across local farmland, their work ensures nutrients from food waste are returned to the soil where they belong.

Thanks to their skill, reliability, and commitment, farmers get a sustainable alternative to synthetic fertilisers while we keep the circular economy turning.

We're on the map!

Thanks to BiogasWorld for the spotlight on Ecogas and the growing role of renewable gas in Aotearoa. Proud to be leading this shift with our partners at First Renewables (Clarus), turning food scraps into energy, fertiliser, and progress toward a cleaner, circular future.
